- **Focal point:** agile product development
- **Declared objective:** making development projects faster, cheaper, and more successful
- **Vision & mission:** developing humans, projects, products, and organizations
- **Previous achievements:** more quality, shorter Time-to-Market and lower costs in over one hundred development projects

Heinz Erretkamps is a pioneer and protagonist in implementation, integration and application of agile methods in the non-IT sector. Based on his long-time experience, he fuses agile and lean in the development of mechatronic products and product management. He operates under the name **agilean**. Prior to that, Heinz Erretkamps was in charge of Knowledge Management and Agile Methods at Johnson Controls Automotive Europe departments. He has brought **agilean** to over one hundred projects and 20 companies from the most varying branches in the past eight years. His speeches at national and international conferences motivate, and he creates an experimental environment that strongly impresses the participants. The Certified Scrum Master, Scrum Product Owner and Certified Scrum Professional draws from his experience in process optimization, IT, manufacturing, and industrial art. He studied at the Universities of Applied Sciences in Rosenheim and Lower Rhine, and holds diplomas in wood engineering and industrial engineering.

OUR METHODS FOR YOUR SUCCESS

Understanding:

Our **agilean** seminars strive from know-how and enthusiasm. They convey all skills that your company needs to develop premium products agilely and leanly.

Concept Development:

Based on the spirit and policies of agilean, our real-world conceptual design transforms your challenges into a successful idea. It plans and describes the future proceeding both iteratively and incrementally. Your development teams achieve their goals securely – in small, precisely inter-coordinated steps.

Implementation:

agilean accompanies your business in practical development. You will master your concrete challenges, and learn for the future in a combination of training and real implementation. Intermediate results are delivered in strict time, and Lessons Learned analyzes the retrospective productively. Your development achieves the skill to not only successfully finish a current project, but also future projects agilely and leanly.

Coaching:

We coach your most important forces according to their function in the development process – on-site and for the site. Every accompanied employee attains exactly those skills needed for the key position to fruitfully contribute his/her know-how to the company's practice.

Mentoring:

Together with you and always following your terms, we identify the forces with the highest potential for the **agilean** product development in your company. We ensure that they acquire the necessary knowledge, understand their roles, and that they take the place that you destined them for.
